PROFESSIONAL SUMMARY

Full Stack Developer with 3 years of experience designing and building scalable web and mobile applications using Python, Django, Django REST Framework, React.js, React Native, PostgreSQL, MQTT, Redis, and WebSockets. Experienced in industrial IoT, energy monitoring, production tracking, real-time dashboards, REST API development, database optimization, and Linux server management and deployment. Strong background in delivering end-to-end solutions spanning backend architecture, responsive web frontends, mobile apps, and cloud-hosted infrastructure.

TECHNICAL SKILLS

Frontend: React.js, Redux, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS, Bootstrap
Mobile: React Native, Expo
Backend: Python, Django, Django REST Framework, FastAPI, Flask
Database: PostgreSQL, MySQL, MongoDB, SQLite
Realtime & Messaging: MQTT, WebSockets, Django Channels, Celery, Redis
DevOps & Infrastructure: Linux, Server Administration, Nginx, Docker, Cloud Deployment, CI/CD basics
Tools: Git, GitHub, GitLab, VS Code, Postman, Webpack
Testing: PyTest, React Testing Library

PROFESSIONAL EXPERIENCE

Full Stack Developer | Febinosolution *2023 – Present*

- Developed and maintained scalable Django and React.js applications.
- Built REST APIs, authentication systems, RBAC modules, and reporting services.
- Implemented real-time communication using Django Channels and WebSockets.
- Optimized PostgreSQL performance through indexing and query tuning.
- Integrated third-party APIs, notification services, and cloud-based solutions.
- Managed Linux servers and deployment/cloud updates for production applications.
- Delivered responsive UI solutions while collaborating in Agile/Scrum teams.

KEY PROJECTS

Energy Monitoring System (EMS)
Built a real-time monitoring platform for 100+ industrial devices tracking electrical, gas, diesel, water-level, and flow parameters, with a companion React Native mobile app for on-the-go monitoring and alerts. Developed analytics dashboards, reports, and consumption-per-production insights, along with organization management features such as logo/branding uploads.

Crane IQ – Crane Operations Monitoring System
Developed a real-time crane operations monitoring platform using Django, Django Channels, and WebSockets to stream live hoist-up/hoist-down operation data to a React dashboard for crane operators and supervisors. Optimized backend performance by replacing multiple per-operation database queries with a single conditional aggregate query (Django Q-filtered Sum), and managed Linux server deployment for the application.

Production Count Monitoring System
Developed web and mobile applications for shift-wise production tracking, target-vs-actual analysis, and performance reporting.

Forklift Tracking Dashboard
Implemented live location tracking, route visualization, speed monitoring, idle-time analysis, and map-based operational dashboards.

Email Tracking System
Created an automated IMAP-based monitoring solution to process machine emails, extract production counts, trigger alerts, and display live analytics.

EDUCATION

B.Tech – Information Technology
Ponjesly College of Engineering | 2019 – 2023

CORE STRENGTHS

REST API Development • Industrial IoT Solutions • Real-Time Data Processing • Mobile App Development • Linux Server Management • Database Optimization • Problem Solving • Debugging • Agile/Scrum • Team Collaboration
